Fresno Transit Free - Accessibility Prototype (Android)

Start Here! (Navigation consistent with Android version)

Some helpful Precursor Shortcuts or extra controls

Hold Shift + Control and draw from one object to another object to create arrows between them.

Hold Space and drag or scroll in order to pan horizontally or vertically

Select Text and Press - or + to increase or decrease its size

Use Command or Control and + or - to zoom in or zoom out (like every other page)

Note: Interacting with the prototype

T / White Text (not slightly gray)
- these are touch targets (click them)
- wait till you see the mouse change into the click action

T
- hover your mouse over the sides of the square
- this will cause your mouse to change into the click action

Read after going through the prototype

1 We are thinking of allowing users to toggle between normal and talk-back layout mode

(ex. Accessibiliy Layouts: ON / OFF Toggle)

talk-back layout mode
- allows users to view the talk-back related layouts without having to have talkback enabled

2 Related Question: Do you believe this toggle would be helpful?
- there are some people that may not have talk-back enabled and would benefit from these layouts

3 Condition: If Talk-Back is enabled
- the changes to the following screens will be in effect

Display Routes - Route List

Manchester Transit Center

Associated Information

ALL
(shows pdf with all of the routes)

Display Routes

Home

Route 28

Map of Route

1 (When talkback is enabled, the route will be described via audio playback when the user gets to this screen)
- the user can tap on the route to hear the playback again

OR 2

An alternate idea is to only play the audio feedback on the route list screen since blind users have no need for a depiction of each route.
- Although we could add a setting that allows users to choose whether to play the audio at the route list screen or the display routes screen. For example, users whose sight is slightly impaired may like the screen that displays the route.

Favorites (no expanded items)

Favorites

Click

Route 28

...

1 Instead of only being able to expand each by clicking on the triangle, users will be able to press any part of the item to expand it.
- (Extra) Note: We could also hide the triangle if that would be better.

2 We will also tell the user when items have been expanded or closed.
- and when routes have been added or deleted
